promise

Promise Promise then

setTimeout() ajax ajax

```
function a() {
    return new Promise(function (resolve, reject) {
        setTimeout(function () {
            console.log('    a');
            resolve('    a  ');
        }, 1000);
    });
}

function b(value) {
    console.log(value)
    return new Promise(function (resolve, reject) {
        setTimeout(function () {
            console.log('    b');
            resolve('    b  ');
        }, 2000);
    });
}

function c() {
    console.log('    c')
}
a().then(b).then(c);
```

- then return promise resolve then
- then return promise then

promise

promise angular1.x $http

```
//1
```

```
$http({
    method: 'GET',
    url: 'news.json',
}).then(function successCallback(response) {
    console.log(response)
}, function errorCallback(response) {
    console.log(response)
})
//2
.then(function() {
    return $http({
        method: 'GET',
        url: 'data.json',
    })
}).then(function(data) {
    console.log(data)
})
//3
.then(function() {
    setTimeout(function() {
        console.log("   ")
    }, 1000)
})
```

await

await await

Promise await

Promise await Promise resolve resolve await

```
function a() {
  return new Promise(function(resolve){
    setTimeout(()=>{
    console.log("a")
    resolve()
    },1000)
  });
}
```

```
function b() {
  return new Promise(function(resolve){
    setTimeout(()=>{
    console.log("b")
    resolve()
    },1000)
  });
}

function c() {
  return new Promise(function(resolve){
    setTimeout(()=>{
    console.log("c")
    resolve()
    },1000)
  });
}

//ES6
a()
  .then(b)
  .then(c);

//ES2017
await a();
await b();
await c();
```

await promise .then(..) await then

```
var sleep = function (time) {
    return new Promise(function (resolve, reject) {
        setTimeout(function () {
            resolve();
        }, time);
    })
};

var start = async function () {
```

```
    //
    console.log('start');
    await sleep(3000);
    console.log('end');
};
start();
```

- async async await
- await promise
- await promise

deferred

$.ajax() 1.5.0 jQuery XHR 1.5.0 deferred done

```
$.when(function(dtd) {
    var dtd = $.Deferred(); //  deferred
    setTimeout(function() {
        console.log(0);
        dtd.resolve(1); //  deferred  done
        //dtd.reject(); // resolve  fail
    }, 1000);
    return dtd;
}()).done(function(num) {
    console.log(num);
}).done(function() {
    console.log(2);
}).done(function() {
    console.log(2);
})

//ajax  deferred
$.when($.post("index.php", {
    name: "wscat",
}), $.post("other.php"))
.done(function(data1, data2) {
    //  ajax  done
    console.log(data1, data2);
}).fail(function(err) {
```

```
□□//   ajax     fail
□□console.log(err)
□})
```

event loop

□□□

then	setTimeout

```
console.log('script start');
setTimeout(function() {
  console.log('setTimeout');
}, 0);//
Promise.resolve().then(function() {
  console.log('promise1');
}).then(function() {//then
  console.log('promise2');
});
console.log('script end');
//
//
```

`script start, script end, promise1, promise2, setTimeout`

```
console.log('script start');
setTimeout(function() {
  console.log('timeout1');
}, 10);
new Promise(resolve => {
    console.log('promise1');
    resolve();
    setTimeout(() => console.log('timeout2'), 10);
}).then(function() {
    console.log('then1')
})
console.log('script end');
```

`script start, promise1, script end, then1, timeout1, timeout2`

worker

Web Worker HTML5 API JavaScript **UI**

```
<input id="btn" type="button" value="  " />
<script>
    let myWorker = new Worker('./worker.js');
    let button = document.querySelector('#btn');
    // myWorker.onmessage = function (event) { //
    //     console.log('       :' + event.data);
    //     myWorker.terminate(); //
```

```
    // }
    myWorker.addEventListener('message', function (e) {
        console.log('       :' + event.data);
        myWorker.terminate(); //
    });
    //    error
    myWorker.addEventListener('error', function (e) {
        console.log('  ', e);
    });
    button.onclick = function () {
        myWorker.postMessage("       ");  //
    }
</script>
```

worker.js

```
addEventListener('message', function (e) {
    postMessage('       : ' + e.data);
}, false);
```

blob

```
let script = 'console.log("hello world!");'
let workerBlob = new Blob([script], { type: "text/javascript" });
let url = URL.createObjectURL(workerBlob);
let myWorker = new Worker(url);
```

JavaScript

	(heap)	(stack)
	heap heap	stack stack
			: ,	Boolean Number String Undefined Null
	new	

new new

```
var a = new String('123')
```

```
var b = String('123')
var c = '123'
console.log(a==b, a===b, b==c, b===c, a==c, a===c)
>>> true false true true true false
console.log(typeof a)
>>> 'object'
```

new String null

```
var a = new String('123')
var b = new String('123')
console.log(a==b, a===b)
>>> false false
```

a b null === null true
